REYNOLDS' IMPROVED METHOD OF CONSTRUCTING Artificial Dentures,

Palented December, 1867.

A FTER an extensive use of this important improvement in practice for nearly two years, it is with full confidence urged upon the profession and the public, as fulfilling more thoroughly and satisfactorily than any other mode, every intention of Artificial Dentures.

As in this method, rubber teeth are altogether discarded, it is desirable that it should fall especially into the hands of those familiar with gold plate work.

It may not be generally known that they who wear cases of artificial teeth, constructed according to this patent, by Dantists who are not licensees, render themselves liable to the penalty of infringement, as well as the operator.

Office rights will be disposed of and instruction given by letter, or at the operating rooms of Reynolds & Reynolds, where the manipulation may be daily witnessed, and where communications may be addressed.

In the climate of the low country, especially, we consider it almost indispensible to carry one successfully through the lassitude of the summer months.
